SPAM ACT 2003

The Spam Act was passed in 2003 by ACMA to regulate commercial electronic marketing and spam

It covers email, SMS, MMS and instant messaging. In summary, the Act it states that in order for your messages to not be considered spam:

You must have consent to send messages

Messages must identify you as the sender

Messages must contain a functional unsubscribe facility

Simple, Efficient, Reliable

Consent

You must have consent to send commercial electronic messages, and you must keep a record of the establishment of consent.

You must not seek to gain consent by sending a message – as this is considered to be an attempt to establish a business relationship. Consent falls under two categories:

EXPRESS CONSENT

This can be gained by the recipient agreeing to receive the service:

- in person
- over the phone
- on a written form
- on a website

INFERRED CONSENT

This can be gained via conspicuous publication of the recipient's electronic address. The message must be relevant to the recipient. For example, if your message is about ****, then the recipient must be identified as ****.

You may not infer consent if the publication includes a statement to the effect that unsolicited messages are unwelcome.

Simple, Efficient, Reliable

Sender Identification

You must identify yourself as the sender

If the sender cannot be recognised in the Sender ID, the content of your message must contain information that identifies you as the sender.

SENDER ID

Using SMS Services' online campaign manager, you may select a Sender ID that will identify you. For example, if your message contains a weather forecast, your Sender ID may be YourWeather rather than a standard mobile number.

IN-MESSAGE IDENTIFICATION

Identifying yourself in the body of the message allows you to explain to the recipient why they are receiving the message. For example, members of an online wine subscription service may be sent the following message:

Fellow Wine Connoisseur, a new shipment has arrived...

This acts as a reminder that *they* subscribed to the service, and that you are providing an added service by letting them know a new product is available.

Simple, Efficient, Reliable

Unsubscribe

You must provide a functional unsubscribe or opt-out method for 30 days.

There are a number of ways you can do this - all must be specified in the body of the message.

1 Reply STOP to the longcode

ONE-OFF

The recipient texts the word STOPS to the Sender ID. As soon as this is received, SMS Services will remove the recipient from a list only until your next message is sent.

PERMANENT

The recipient texts the word STOP followed by a 4 digit ID code. This removes them from a list automatically.

2 Reply STOP to another number

You may choose to have recipients opt-out by texting STOP to your phone directly. This method requires that the recipient is removed from the list within 5 business days.

3 Alternate method

Recipients may call a number or email to an address that you specify in the body of the message. Again, the recipient must be removed from a list within 5 business days.
